SAP IBP, add-in for Microsoft Excel

A blue geometric shape, resembling a parallelogram with a diagonal cut, is positioned behind the text. It has a light blue color and a sharp diagonal edge running from the top-right to the bottom-left.

Keyboard Shortcuts

Keyboard shortcuts

Version 2311.2.0 of the Excel add-in provides the possibility to use keyboard shortcuts for some of the most important SAP IBP functions when working with planning views:

- Save Data: **Ctrl + Alt + S**
- Simulate (Basic): **Ctrl + Alt + B**
- Refresh: **Ctrl + Alt + R**
- Reset Changes: **Ctrl + Alt + Z**

The keyboard shortcuts get the same actions done as when you choose the respective functions in the **SAP IBP** ribbon.

Please note: The keyboard shortcuts do not work for master data workbooks.

Demo

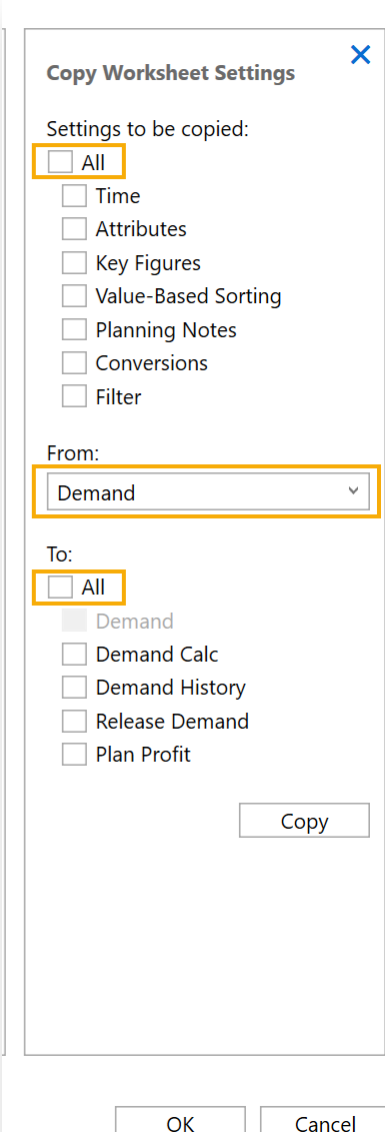

A blue geometric shape, resembling a parallelogram with a diagonal cut, is positioned behind the text.

Enhanced Copy Worksheet Settings Function

Enhanced Copy Worksheet Settings function

With version 2311.2.0, the **Copy Worksheet Settings** Function in the **Create Planning View** and **Edit Planning View** dialogs has been enhanced, as follows:

- It is possible to select all settings that can be copied at once by using the **All** checkbox.
- In the **From:** dropdown the worksheet of the current tab is selected by default when you open the **Copy Worksheet Settings** dialog.
- No worksheet is selected under **To:** by default.
- By using the **All** checkbox under **To:** you copy the settings to all worksheets in the workbook apart from the one selected in the **From:** dropdown.

The screenshot shows the 'Copy Worksheet Settings' dialog box. It has a title bar with a close button (X). The main content area is divided into two sections: 'Settings to be copied:' and 'From:'. Under 'Settings to be copied:', there is a list of checkboxes: 'All' (checked), 'Time', 'Attributes', 'Key Figures', 'Value-Based Sorting', 'Planning Notes', 'Conversions', and 'Filter'. The 'From:' section has a dropdown menu currently showing 'Demand'. Below this, there is a 'To:' section with a list of checkboxes: 'All' (checked), 'Demand', 'Demand Calc', 'Demand History', 'Release Demand', and 'Plan Profit'. A 'Copy' button is located at the bottom right of the main content area. At the very bottom of the dialog, there are 'OK' and 'Cancel' buttons.

Demo

A blue decorative shape, resembling a parallelogram with a diagonal cut, is positioned behind the text.

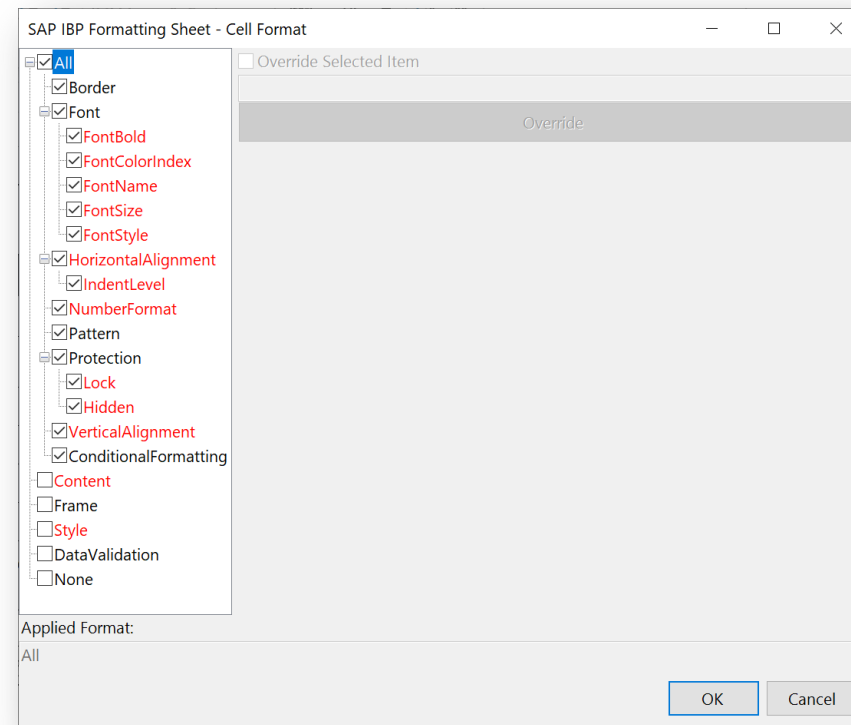

New SAP IBP Formatting Sheet - Cell Format Dialog

New SAP IBP Formatting Sheet - Cell Format dialog

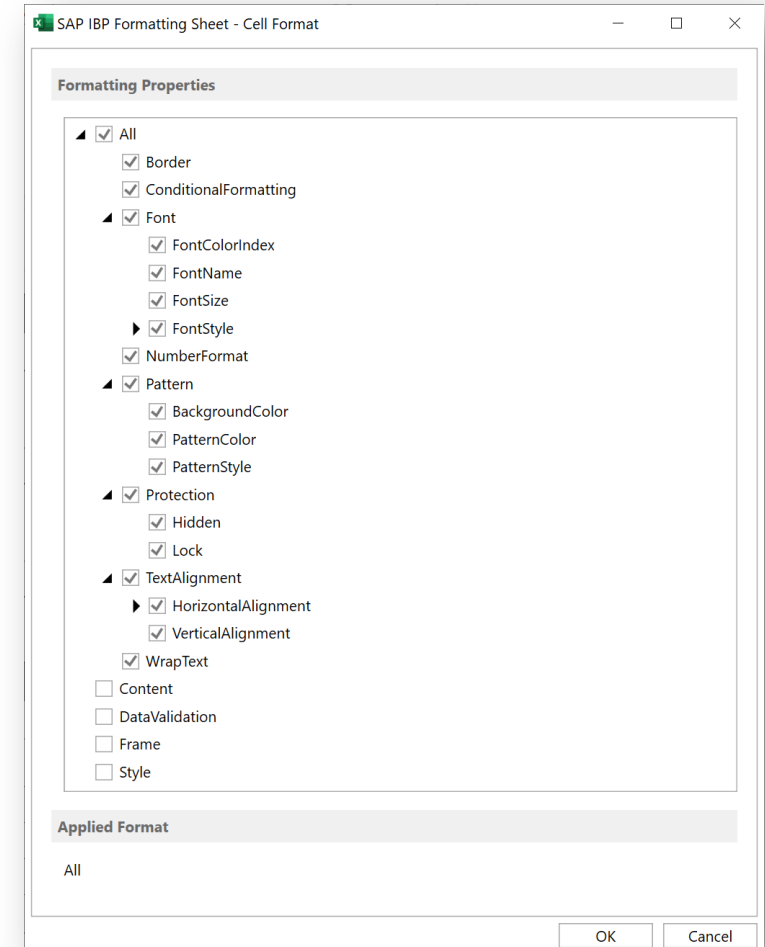

Old and new dialog

With version 2311.2.0, the **SAP IBP Formatting Sheet - Cell Format** dialog has been redesigned and improved.

Old dialog

New dialog

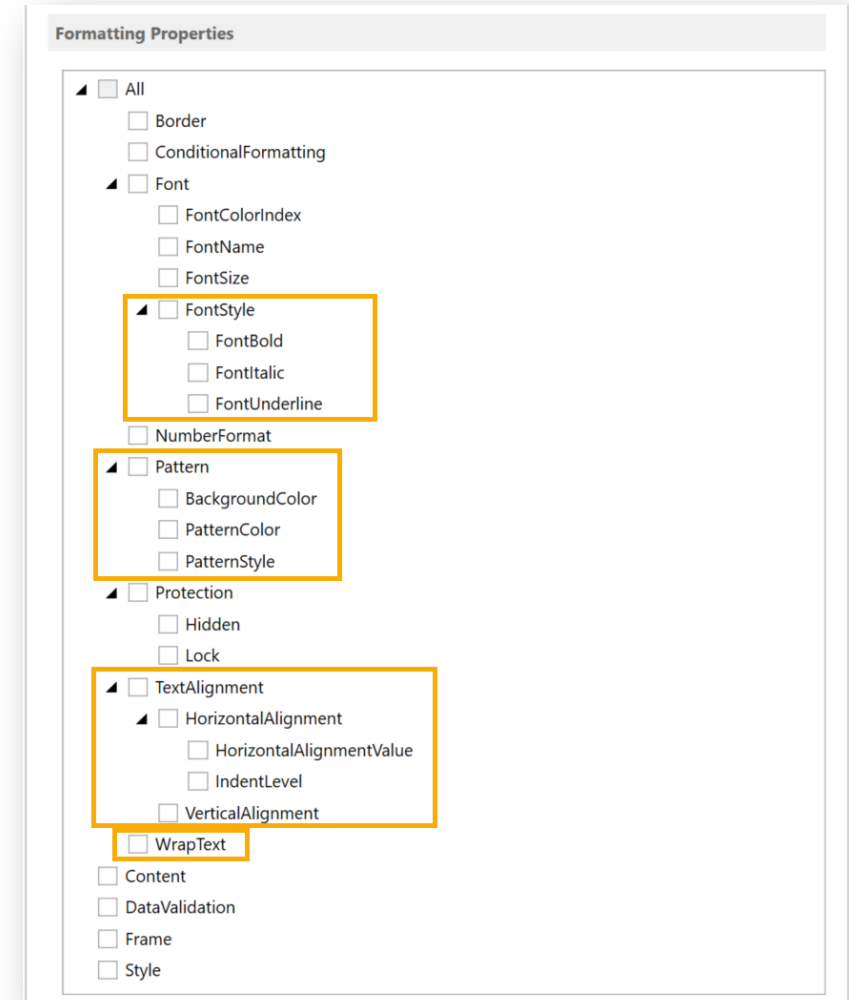

New SAP IBP Formatting Sheet - Cell Format dialog

Improvements

- It is possible to differentiate between **FontBold**, **FontItalic** and **FontUnderline**, instead of taking over all **FontStyle** properties
- It is possible to differentiate between **BackgroundColor**, **PatternColor** and **PatternStyle**, instead of taking over all **Pattern** properties.
- **HorizontalAlignment** and **VerticalAlignement** are grouped together under **TextAlignment**
- The **WrapText** property has been added and can be taken over independently.

For more information about the available properties, see SAP Help Portal at [Formatting Properties | SAP Help Portal](#)

Demo

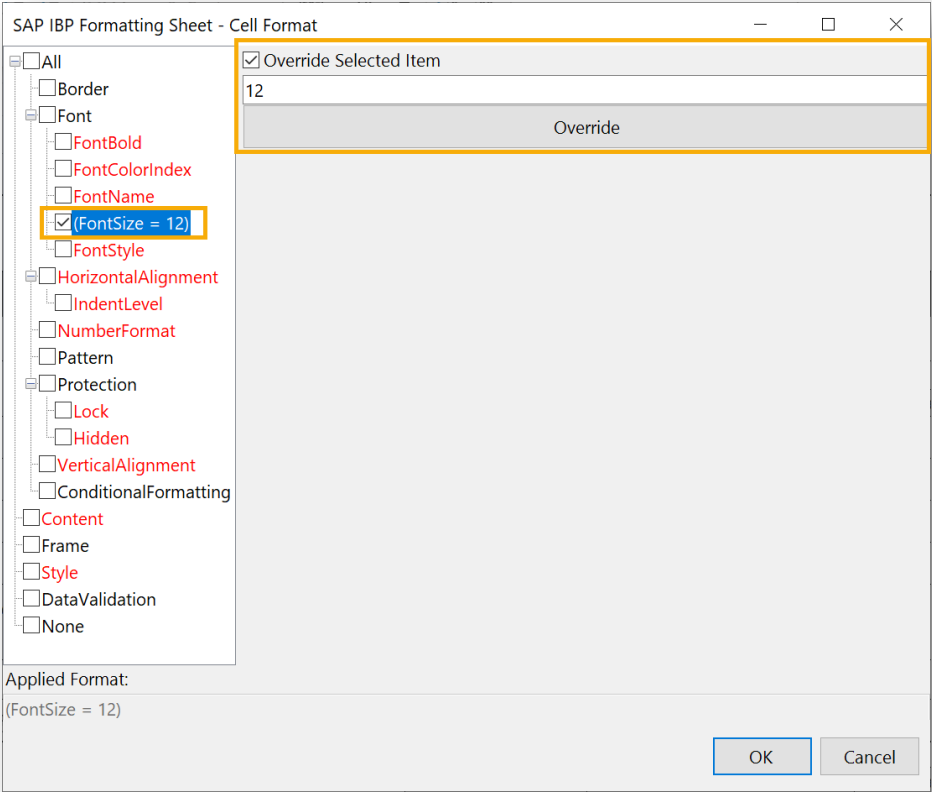

New SAP IBP Formatting Sheet - Cell Format dialog

Important to know (1/2)

The **Override Selected Item** function has been removed. This makes the dialog less complex and easier to understand.

With the **Override Selected Item** function, it was possible to override the values of the formatting properties that have been defined in the formatting rule. For example, you could change the font size to 12, even if you defined 11 in your formatting rule.

Please note: If you are using the **Override Selected Item** function in one of your formatting rules, the respective formatting rule won't be applied after having installed version 2311.2.0 of the Excel add-in. In this case, adjust the rule by again selecting the properties that should be taken over.

Changed Member Default Format	10.000	Border FontColorIndex	Label
Formatting on Specific Member/Property:			
Total Member	10.000	(FontSize = 12)	Label
KEY_FIGURES.Percentage Equals Y	100,0%	NumberFormat	Label
Add Member/Property			

New SAP IBP Formatting Sheet - Cell Format dialog

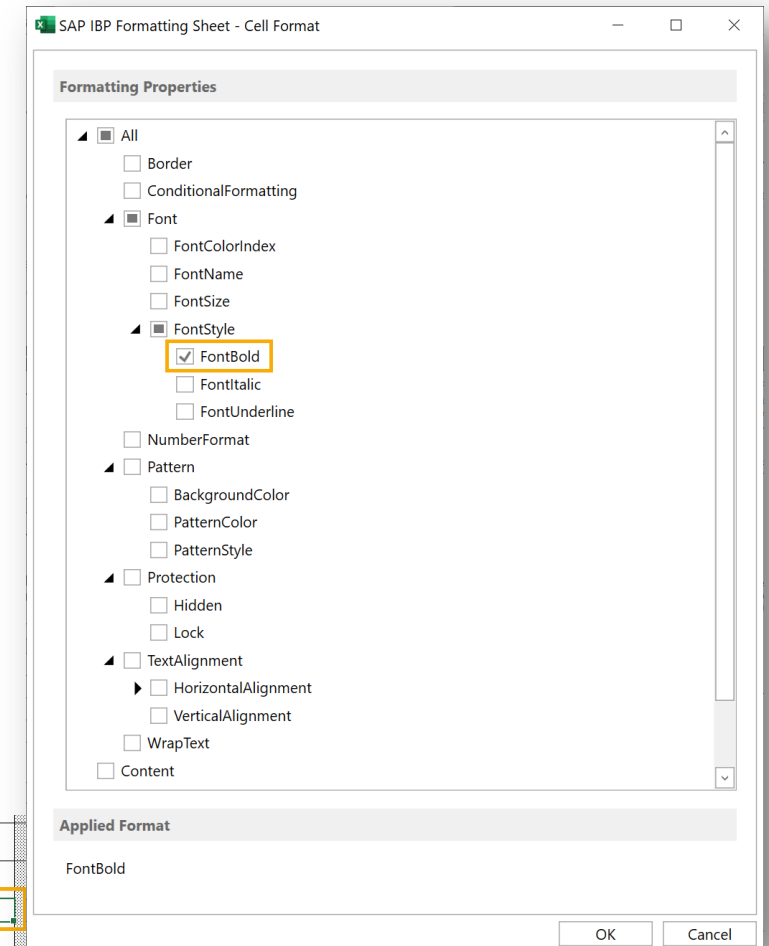

Important to know (2/2)

Please always make sure to only select the formatting properties that really need to be taken over when formatting the cells of the planning view.

For example, select **FontBold** instead of **All** in the **SAP IBP Formatting Sheet - Cell Format** dialog if you want to have respective values in the planning view formatted bold without changing, for example, the background color.

With this, all other formatting properties will stay as they are, which reduces the time it takes to format the cells in a planning view.

☒ Apply	Changed Member Default Format	10.000	Border FontColorIndex
☒ Apply	Formatting on Specific Member/Property:		
	Total Member	10.000	FontBold
	KEY_FIGURES.Percentage Equals Y	100,0%	NumberFormat
	Add Member/Property		

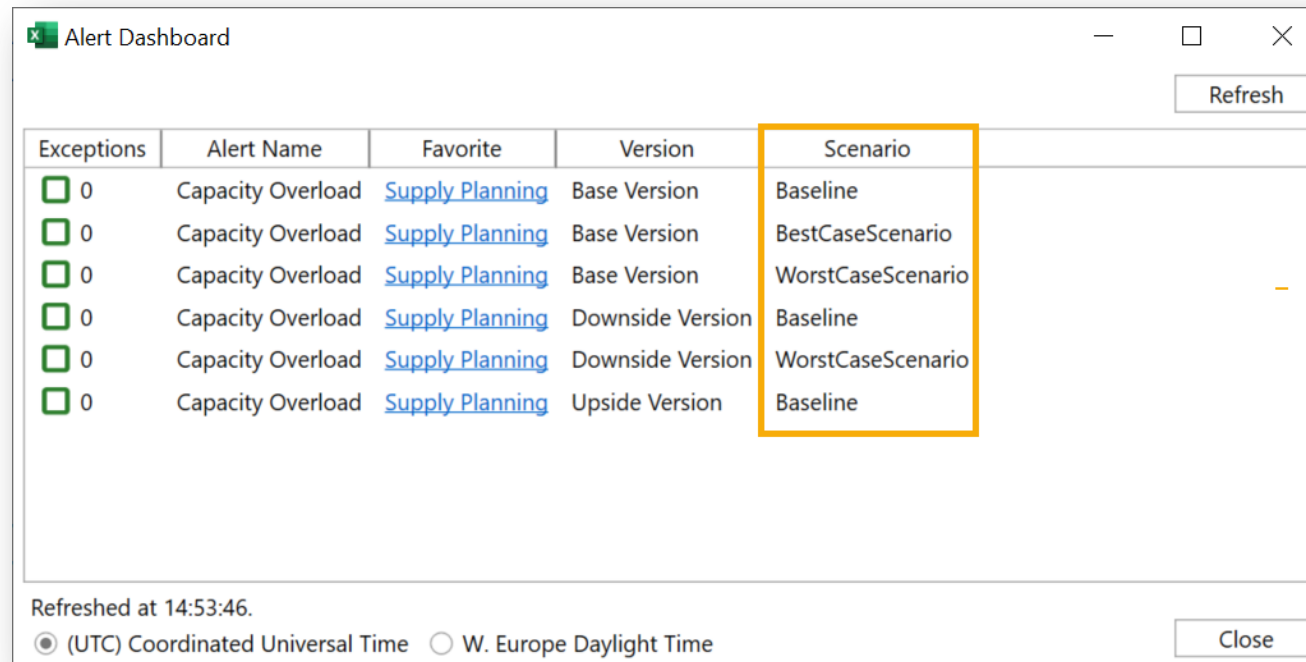

A blue geometric shape, resembling a parallelogram with a diagonal cut, serves as a background for the text.

Scenario Visible in the Alert Dashboard Function

Scenario visible in the Alert Dashboard function

Main enhancement

With version 2311.2.0, an additional column in the **Alert Dashboard** dialog displays the scenario for which the alert has been set up. The number of exceptions are calculated and displayed for each version and scenario combination.

Exceptions	Alert Name	Favorite	Version	Scenario
☐ 0	Capacity Overload	Supply Planning	Base Version	Baseline
☐ 0	Capacity Overload	Supply Planning	Base Version	BestCaseScenario
☐ 0	Capacity Overload	Supply Planning	Base Version	WorstCaseScenario
☐ 0	Capacity Overload	Supply Planning	Downside Version	Baseline
☐ 0	Capacity Overload	Supply Planning	Downside Version	WorstCaseScenario
☐ 0	Capacity Overload	Supply Planning	Upside Version	Baseline

Refreshed at 14:53:46.

☒ (UTC) Coordinated Universal Time ☐ W. Europe Daylight Time

Alert for Recommended Safety Stock
Inventory Optimization Alert: Alert for location products where RECOMMENDEDSAFETYSTOCK is zero in a specific week.
References: Alert for Recommended Safety Stock
Recommended Safety Stock

Alert for Safety Stock Delta

Demand Capacity Projected Stock External Capacity Bill of Material

OK Cancel

With version 2311.2.0 or newer, the **Alert Dashboard** is supported when you use **All Versions** or **All Scenarios** in the alert definition.

The text field for **Name in Alert Dashboard (Favorites only)** stays active if you select **All Versions** or **All Scenarios** in the **Version** or **Scenario** dropdown.

In this way, the same alert can be displayed several times in the **Alert Dashboard** for different version and scenario combinations, as shown in the previous slide.

A blue geometric shape, resembling a parallelogram with a diagonal cut, is positioned on the left side of the slide. It has a solid blue fill and a sharp diagonal edge running from the top-left towards the bottom-right.

Enhancements to Local Members

Enhancements to local members

Overview

With version 2311.2.0 of the Excel add-in, working with local members (locally calculated key figures) has been enhanced in the following way:

- Additional possibility to reference members relative to the actual cell. Therefore, the existing local member formula **EPMMEMBER()** has been enhanced with an additional parameter that defines the relative position of the member.

= EPMMEMBER(member, relative position)

- Support of "\$" (absolute cell references) in local member formulas, to reference a fixed column or row in the Microsoft Excel grid.
- Performance improvements when loading planning views with local members included.

Enhancements to local members

Referencing members relative to the actual cell - example 1 (1/3)

In your planning view, you want to see the delta between the value of **Consensus Demand** in the current and the previous time periods.

SAP IBP Local Members												
Planning Area: User:												
Last Refresh: 2023-Aug-30 09:14:58 UoM: EA Currency: EUR												
Product Group	Product ID	Key Figure	23-Aug	23-Sep	23-Oct	23-Nov	23-Dec	24-Jan	24-Feb	24-Mar	24-Apr

		Delta prev. period		-2.141	1.501	-806	1.043	-124	-2.318	2.169	-1.073	
	Headphones 110	Consensus Demand	46.481	44.244	46.027	44.881	46.283	45.998	43.242	46.044	44.474	
		Delta prev. period		-2.236	1.782	-1.145	1.401	-285	-2.756	2.802	-1.569	
	Headphones 120	Consensus Demand	23.147	22.398	23.017	22.397	23.117	23.139	21.551	22.929	22.337	
		Delta prev. period		-749	620	-620	720	21	-1.588	1.378	-592	
	Headphones 600	Consensus Demand										
		Delta prev. period		0	0	0	0	0	0	0	0	
	Headphones 700	Consensus Demand										
		Delta prev. period		0	0	0	0	0	0	0	0	
HOME THEATER	Home Theater 200	Consensus Demand	10.467	10.135	8.031	7.406	7.323	7.460	7.227	7.732	7.686	
		Delta prev. period		-332	-2.104	-626	-83	137	-233	505	-46	
	Home Theater 210	Consensus Demand	9.274	8.523	6.746	6.238	6.191	6.451	6.309	6.774	6.380	
		Delta prev. period		-751	-1.777	-507	-48	261	-143	465	-394	
	Home Theater 220	Consensus Demand	11.062	10.668	8.574	7.996	8.071	8.272	7.907	8.459	8.243	
		Delta prev. period		-394	-2.094	-579	76	201	-365	551	-215	

Therefore, the local member **Delta prev. period** has been added to the planning view.

Enhancements to local members

Referencing members relative to the actual cell - example 1 (2/3)

In the planning view, the Microsoft Excel formula looks as follows:

The screenshot shows the SAP IBP Local Members report. The formula bar at the top displays the formula: `=IFERROR(L6-K6;\"')`. The table below shows data for Headphones 100 and Headphones 110 across three time periods: 23-Aug, 23-Sep, and 23-Oct. The 'Delta prev. period' row for Headphones 100 shows a value of -2.141 in the 23-Sep column, which is highlighted with a yellow border and a warning icon.

	Product Group	Product ID	Key Figure	23-Aug	23-Sep	23-Oct
6	HEADPHONES	Headphones 100	Consensus Demand	35.888	33.747	35.248
7			Delta prev. period		-2.141	1.501
8		Headphones 110	Consensus Demand	46.481	44.244	46.027
9			Delta prev. period		-2.236	1.782

When we check the local member **Delta prev.period** in the **Report Editor** on the **Local Members** tab, the formula is the following:

```
=IFERROR(EPMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND])  
-EPMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND],-1),\"')
```

- Especially for the first period, where no previous period exists, the **IFERROR()** formula needs to be included to avoid exceptions.
- **EPMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND])** references the key figure value of the same time period (0).
- **EPMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND],-1)** references the key figure value of the previous time period (-1).

The local member is attached to the key figure **Consensus Demand**, and inserted after it, see its configuration on the next slide.

Enhancements to local members

Referencing members relative to the actual cell - example 1 (3/3)

The screenshot shows the 'Report Editor' window with the 'Local Members' tab selected. On the left, a list of local members includes 'Delta prev. period', which is highlighted. The main area displays the 'Local Member Properties' for this member. The 'Name' field is 'Delta prev. period'. The 'Description' field is also 'Delta prev. period'. The 'Formula' field contains the expression: `=IFERROR(EPMEMBER([KEY FIGURES].[CONSENSUSDEMAND]) - EPMEMBER([KEY FIGURES].[CONSENSUSDEMAND], -1), "")`. Below the formula, the 'Insert After' radio button is selected. The 'Attached to' section has the 'Member' radio button selected, and the 'Consensus Demand' member is chosen from the dropdown. At the bottom, there are 'Add', 'Delete', 'OK', and 'Cancel' buttons.

Please note: To be able to use the **Report Editor** function, you need to have the **Planning View Template** permission (PV_TMPLT) assigned to your user in the restriction field **Administration Functions**.

Enhancements to local members

Referencing members relative to the actual cell - example 2 (1/3)

Starting with the current time period in the planning view, you want to sum up the key figure values of **Consensus Demand** in a rolling manner to see the total demand after x month.

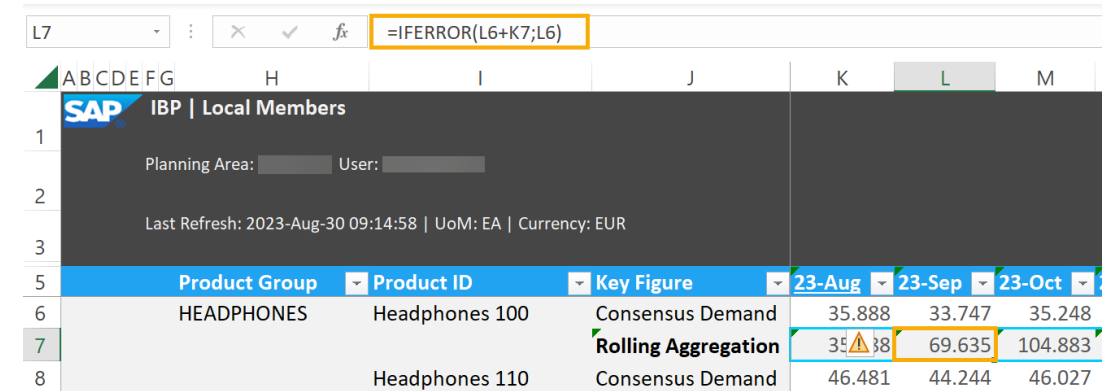

SAP IBP Local Members												
Planning Area: User:												
Last Refresh: 2023-Aug-30 09:14:58 UoM: EA Currency: EUR												
Product Group	Product ID	Key Figure	23-Aug	23-Sep	23-Oct	23-Nov	23-Dec	24-Jan	24-Feb	24-Mar	24-Apr

		Rolling Aggregation	35.888	69.635	104.883	139.324	174.809	210.170	243.214	278.426	312.566	
	Headphones 110	Consensus Demand	46.481	44.244	46.027	44.881	46.283	45.998	43.242	46.044	44.474	
		Rolling Aggregation	46.481	90.725	136.752	181.633	227.916	273.913	317.155	363.199	407.673	
	Headphones 120	Consensus Demand	23.147	22.398	23.017	22.397	23.117	23.139	21.551	22.929	22.337	
		Rolling Aggregation	23.147	45.545	68.562	90.959	114.077	137.215	158.766	181.695	204.032	
HOME THEATER	Headphones 600	Consensus Demand										
		Rolling Aggregation	0	0	0	0	0	0	0	0	0	
	Headphones 700	Consensus Demand										
		Rolling Aggregation	0	0	0	0	0	0	0	0	0	
	Home Theater 200	Consensus Demand	10.467	10.135	8.031	7.406	7.323	7.460	7.227	7.732	7.686	
		Rolling Aggregation	10.467	20.602	28.634	36.040	43.363	50.823	58.050	65.782	73.468	
	Home Theater 210	Consensus Demand	9.274	8.523	6.746	6.238	6.191	6.451	6.309	6.774	6.380	
		Rolling Aggregation	9.274	17.797	24.542	30.781	36.971	43.423	49.732	56.505	62.885	

Therefore, the local member **Rolling Aggregation** has been added to the planning view.

Enhancements to local members

Referencing members relative to the actual cell - example 2 (2/3)

In the planning view the Microsoft Excel formula looks as follows:

The screenshot shows the SAP IBP Local Members interface. The formula bar at the top displays `=IFERROR(L6+K7;L6)`. The table below shows data for Headphones 100 and Headphones 110 across three time periods: 23-Aug, 23-Sep, and 23-Oct. The 'Rolling Aggregation' row for Headphones 100 is highlighted, showing values 35.888, 69.635, and 104.883. The cell L7 (23-Sep) is highlighted with a yellow border.

	Product Group	Product ID	Key Figure	23-Aug	23-Sep	23-Oct
5						
6	HEADPHONES	Headphones 100	Consensus Demand	35.888	33.747	35.248
7			Rolling Aggregation	35.888	69.635	104.883
8		Headphones 110	Consensus Demand	46.481	44.244	46.027

When we check the local member **Rolling Aggregation** in the **Report Editor** on the **Local Members** tab, the formula is the following:

```
=IFERROR((EPMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND])+EPMEMBER(000,-1)),  
EPMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND]))
```

- Especially for the first period, where no previous period exists, the **IFERROR()** formula needs to be included to avoid exceptions.
- **EPMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND])** references the key figure value of the same time period (0).
- **EPMEMBER(000,-1)** references the value of the local member with ID **000** of the previous time period (-1).

The local member is attached to the key figure **Consensus Demand** and inserted after it, see its configuration on the next slide.

Enhancements to local members

Referencing members relative to the actual cell - example 2 (3/3)

The screenshot shows the 'Report Editor' window with the 'Local Members' tab selected. On the left, a tree view shows 'Local Members' expanded, with 'Rolling Aggregation' highlighted. The main area displays the 'Local Member Properties' for 'Rolling Aggregation'.

Local Member Properties

- ☒ Enable
- Name: Rolling Aggregation
- Description: Rolling Aggregation
- Formula: `=IFERROR(EPMEMBER((KEY FIGURES].[CONSENSUSDEMAND])+EPMEMBER(000,-1),EPMEMBER((KEY FIGURES].[CONSENSUSDEMAND]))`
- ☐ Insert Before ☒ Insert After ☐ Insert at Position 1
- ☐ Use Microsoft Excel cell references

Attached to

- ☒ Member ☐ Member Combination ☐ Dimension ☐ Column Axis ☐ Row Axis ☐ Local Member
- Consensus Demand

Actions

Buttons: Add, Delete, OK, Cancel

Enhancements to local members

Referencing members relative to the actual cell - additional details

The examples mentioned can be used with any other key figure.

The relative position parameter in **EPMMEMBER(member, relative position)** specifies the following:

- The relative position of the column if the member is situated on the row axis.
- The relative position of the row if the member is situated on the column axis.

This means that if you use different layout settings, having the key figures for example on the column axis, the relative position **x** in

EPMMEMBER([KEY_FIGURES].[].[CONSENSUSDEMAND], x)

lets you add a key figure value from another row to your calculation.

Enhancements to local members

Support of "\$" in local member formulas - example (1/3)

The **Rolling Aggregation** local member explained in the previous example can also be configured by using "\$" (absolute cell references) in its formula:

The screenshot shows the SAP IBP Local Members interface. The formula bar at the top displays the formula `=SUM($K6:L6)` for cell L7. Below the formula bar is a table with columns for Product Group, Product ID, Key Figure, and time periods (23-Aug, 23-Sep, 23-Oct). The table has three rows: Consensus Demand, Excel-based, and IBP-based. The Excel-based row is highlighted, and the value 69.635 in column L (23-Sep) is highlighted with an orange box, corresponding to the active cell L6. The IBP-based row shows the same values as the Excel-based row.

	Product Group	Product ID	Key Figure	23-Aug	23-Sep	23-Oct
1	SAP IBP Local Members					
2	Planning Area: User:					
3	Last Refresh: 2023-Aug-30 09:14:58 UoM: EA Currency: EUR					
5	Product Group	Product ID	Key Figure	23-Aug	23-Sep	23-Oct
6	HEADPHONES	Headphones 100	Consensus Demand	35.888	33.747	35.248
7			Excel-based	35.888	69.635	104.883
8			IBP-based	35.888	69.635	104.883

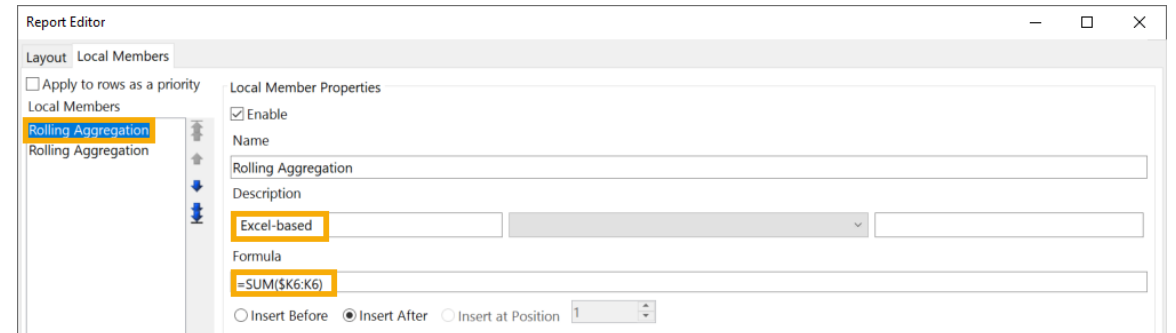

In the local member **Excel-based**, the key figure values of **Consensus Demand** are summed up always starting in column K (which is fixed with the \$ symbol) until the time period of the active cell (in this case, L6). Column L is not fixed by using the \$ symbol so it's adjusted relative to the cell we are inspecting.

Enhancements to local members

Support of "\$" in local member formulas - example (2/3)

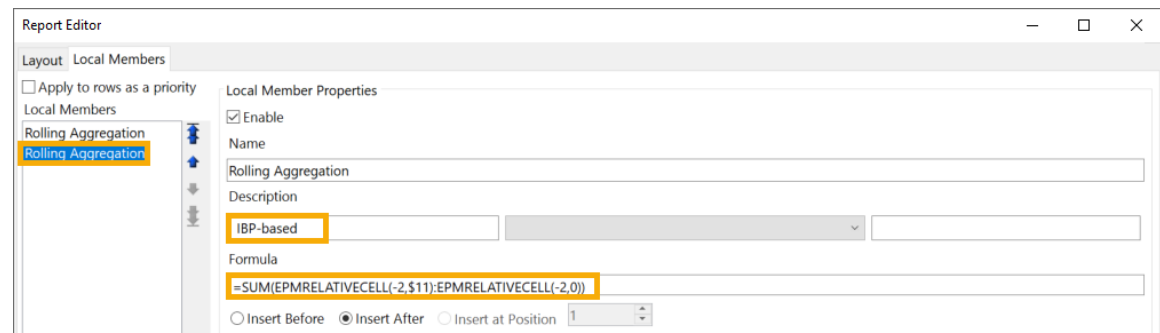

When we check the local member **Excel-based** in the **Report Editor** on the **Local Members** tab, the formula is the following:

=SUM(\$K6:K6)

The same can be achieved by using the IBP-based formula **EPMRELATIVECELL**. When checking the local member **IBP-based** in the **Report Editor** on the **Local Members** tab the formula is the following:

**=SUM(EPMRELATIVECELL(-2,\$11):
EPMRELATIVECELL(-2,0))**

Enhancements to local members

Support of "\$" in local member formulas - example (3/3)

If you are used to Microsoft Excel formulas, you can use the Excel-based formula. Otherwise, the IBP-based formula can be used. The result is the same, irrespective of the type of formula you are using.

The IBP-based formula **EPMRELATIVECELL(position row, position column)** is a new formula to handle such use cases.

In our example:

EPMRELATIVECELL(-2,\$11) references the cell two rows above (-2) in the fixed column 11 (\$11) of the Microsoft Excel grid, which is column K in this example.

EPMRELATIVECELL(-2,0) references the cell two rows above (-2) in the same column 0 (relative position).

Enhancements to local members

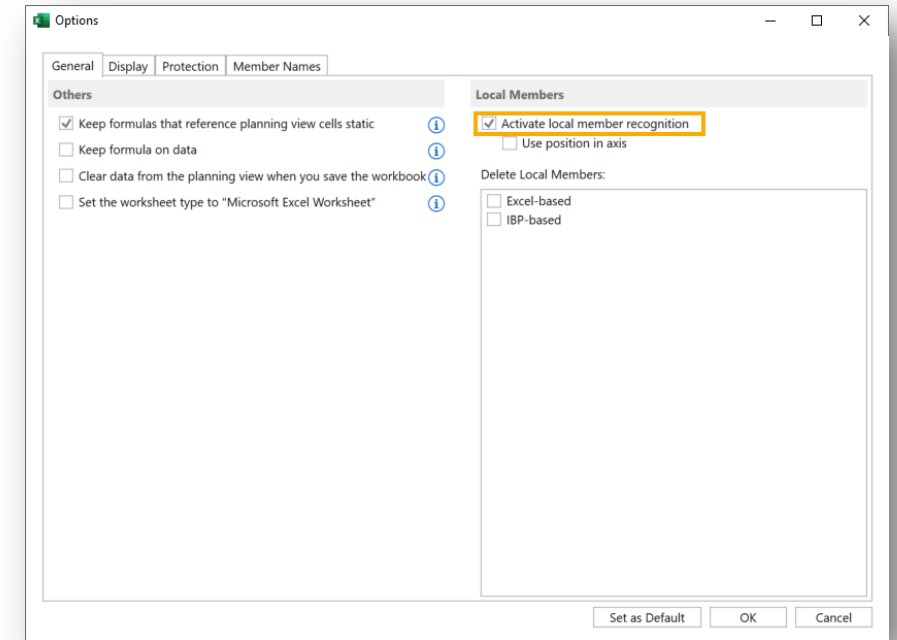

Nice to know

To create local members in your planning view, you can select the **Activate local member recognition** checkbox in **Options**.

If you then insert additional rows or columns into your planning view and enter formulas, the Excel add-in automatically converts them into a local member and attaches them to the respective member if referenced, or to the row or column axis.

You can then check and adjust the local member in the **Report Editor** function on the **Local Member** tab.

If you want to create the local members described in the previous examples by using local member recognition, first create a local member referencing the **Consensus Demand** value of the same time period to attach it to this key figure. In a second step, adjust the formula either by using the **Report Editor** or by changing it in a cell of the local member in the planning view. (The system automatically applies any changes to all cells of the local member if the **Activate local member recognition** checkbox is selected.)

A blue geometric shape, resembling a parallelogram with a diagonal cut, is positioned on the left side of the slide. It has a solid blue fill and a sharp diagonal edge running from the top-left towards the bottom-right.

Performance Improvements

Performance improvements

With version 2311.2.0 of the Excel add-in, performance improvements in the following areas have been implemented:

- **Save Data** function: Save happens asynchronously (mainly in the cases when the dialog for reason codes, comments, and sharing is displayed.)
- **Log On** function: Time it takes to log in to the **SAP IBP** system has been improved.
- **Go offline** and **Go online** function.
- Loading planning views with local members included.

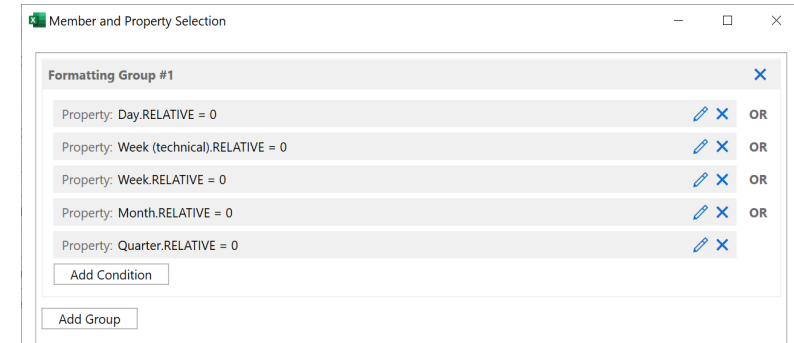

A blue geometric shape, resembling a parallelogram or a trapezoid with a diagonal cut, is positioned on the left side of the image. It has a solid blue fill and a sharp diagonal edge running from the top-left towards the bottom-right.

Deleted Global Config. Parameter
DISABLE_LEADZEROS_TIME_RELATIVES

Deleted global config. parameter DISABLE_LEADZEROS_TIME_RELATIVES

The global configuration parameter **DISABLE_LEADZEROS_TIME_RELATIVES** has been deleted with SAP IBP release 2311.

This parameter was previously used for formatting rules based on the **RELATIVE** property of time periods.

Since Excel add-in version 2011.2.0, there is no difference whether the parameter is enabled or not, the respective formatting rules based on the **RELATIVE** property of time periods are applied correctly.

One exception is if you are using formatting rules for the **RELATIVE** property of time periods with operators **Is Like** or **Is Not Like** and had applied the logic with leading zeroes before, then the rule won't be applied correctly after the upgrade to SAP IBP 2311. In this case please adjust or delete the respective formatting rules.

With SAP IBP release 2311, the logic without leading zeroes is applied generally and the global configuration parameter is deleted.

A blue geometric shape, resembling a parallelogram with a diagonal cut, is positioned on the left side of the slide. It has a solid blue fill and a sharp diagonal edge running from the top-left towards the bottom-right.

**Keep Microsoft Excel Filter
in Columns Not Related to SAP IBP Data**

Keep Microsoft Excel filter in columns not related to SAP IBP data

If a planning view includes non-SAP-IBP-related columns to the right of the planning view columns with a Microsoft Excel Filter applied, as of Excel add-in version 2208.2.0, this filter is removed when you refresh the planning view.

With version 2311.2.0, the Microsoft Excel filter is kept for non-SAP-IBP-related columns that are positioned directly after the planning view columns and that have a header title.

New Upgrade Policy for the Excel Add-In

New upgrade policy for the Excel add-in (1/2)

As part of the **SAP IBP release 2311** we will introduce a new upgrade policy for versions of the SAP IBP, add-in for Microsoft Excel (Excel add-in). **The minimum version will be raised to 2205.2.0** (version six versions before 2311) **and with each subsequent release we plan to raise the minimum version of the Excel add-in in a rolling manner by one major version.**

This means once SAP IBP 2402 is released the minimum required Excel add-in version will be 2208.2.0 and so on.

	2111 (n-8)	2202 (n-7)	2205 (n-6)	2208 (n-5)	2211 (n-4)	2302 (n-3)	2305 (n-2)	2308 (n-1)	2311 (n)
Maintenance								X	X
Compatible			X	X	X	X	X	X	X
Incompatible	X	X							

Maintenance: As before, Excel add-in versions are in maintenance and supported for 6 months after their release. This means that the current and previous versions of the Excel add-in are in active maintenance and will receive updates. In certain cases, updates will be only applied to the current version.

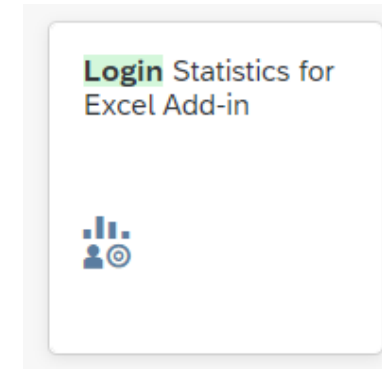

Compatible: Users can use the current version or six prior versions of the Excel add-in. As a consequence, upgrading just once a year is still possible. Nevertheless, we propose a regular upgrade schedule to keep up with security, stability, performance and feature enhancements.

Incompatible: Affected versions of the Excel add-in are incompatible. The installation of a newer version is mandatory.

New upgrade policy for the Excel add-in (2/2)

Mitigation:

- If not done yet, [download](#) and roll-out a newer version of the Excel add-in to your user base.
- Check in the **Login Statistics for Excel Add-in** app to see which of your users are affected and notify them to upgrade their Excel add-in in time.

- By using the global configuration parameter **MINIMUM_ADDIN_VERSION** you can let the system bring up a warning message each time a user logs on with a version older than the specified one. To do so, change the value of the parameter to, for example **2205.2.0**.

A blue geometric shape, resembling a parallelogram with a diagonal cut, is positioned on the left side of the slide. It has a light blue color and a sharp diagonal edge running from the top-left towards the bottom-right.

Missing Planning Object Records

Improved Generation of missing Planning Object Records

With new global configuration parameter **ADD_ALL_PLAN_OBJECT_RECORDS** you can control how missing planning object records are created if needed during disaggregation in the IBP Excel Add-In or Planner Workspaces.

- If you set the value to 'NO' (default) missing planning object records are only generated if no planning object records exist that can be used as disaggregation target.
- If you set the value to 'YES' missing planning object records are always generated if needed.

Improved Generation of missing Planning Object Records - Example

A key figure is stored on monthly level. Its values are equally disaggregated without proportionality.

	January	February	March
Product A	<i>no record exists</i>	100	<i>no record exists</i>

Starting Point

Value of first quarter is changed from 100 to 150

	January	February	March
Product A	<i>no record exists</i>	150	<i>no record exists</i>

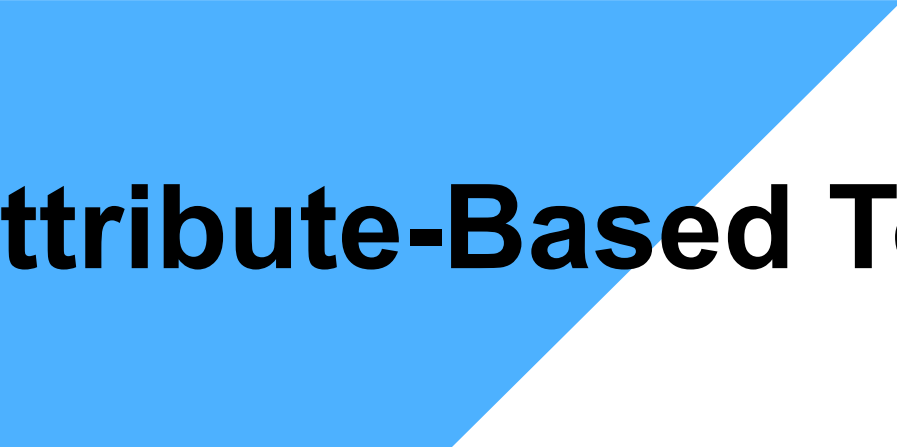

ADD_ALL_PLAN_OBJECT_RECORDS = 'NO'

	January	February	March
Product A	50	50	50

ADD_ALL_PLAN_OBJECT_RECORDS = 'YES'

Planner Workspaces

A blue geometric shape, resembling a stylized arrow or a parallelogram with a diagonal cut, pointing towards the right. It is positioned behind the text.

Attribute-Based Totals

Attribute-Based Totals

Attribute-based totals can be used to display key figure data aggregated across attribute combinations. The aggregation mode is defined in the key figure definition. Key figures which are editable, can be edited on attribute-based totals as well. You can change the values of attribute-based totals on one level in one simulation run. You can't change key figure values on different levels. Grand totals aren't editable. To update the values that you changed, you must save your data or run a simulation. When changing attribute-based totals, the disaggregation mode defined in the key figure definition will be taken into consideration.

The global configuration parameter `MAX_SUB_TOTALS` in the `PLAN_VIEW` parameter group, can be used to determine the number of attributes for which you can display totals in a planning view.

Attribute-based totals can't be used in combination with value-based filters.

Attribute-based totals can be formatted differently by using the appearance feature.

Full-Screen Mode

Full-Screen Mode

The full-screen mode has been further enhanced. Crucial actions like simulate and save are accessible while working in full-screen mode. The same applies to keyboard shortcuts. The side panel is also accessible while you are in full-screen mode, so you can easily add another key figure to the planning view. Furthermore, the planning view position will be remembered in case you enter or leave the full-screen mode.

The full-screen mode is not being stored as part of the Workspace definition. Consequently, the Workspace will open in the normal mode when you refresh the page, or open the Workspace the next time.

Enabling the design mode, will end the full-screen mode.

Alert Snoozing

Alert Snoozing

Alert snoozing user experience has been improved with the following features:

- Alerts are displayed in two tabs (Active and Snoozed) making them easy to access.
- Pre-configuration of the way you want to snooze alerts at the Define and Subscribe to Custom Alerts app level.
- Fast snooze alerts that reduces user interactions.
- Editing and unsnoozing alerts is made easy and intuitive.

Alert Snoozing (Configuration)

Alerts can be configured to be snoozed for **all users** or **individual users**. All subscriptions of the same alert definition have the same settings.

The screenshot displays the SAP 'Edit Custom Alert Definition' web interface. The top navigation bar includes the SAP logo, the title 'Edit Custom Alert Definition', and various utility icons. A breadcrumb trail shows six steps: 1. General Information (active), 2. Data Selection, 3. Alert Rules, 4. Display Options, 5. Procedure... (Optional), and 6. An additional step. The main content area is titled '1. General Information' and contains a form for entering alert details. The 'Snooze Alerts For' dropdown menu is set to 'All Users' and is highlighted with a red rectangular box. Below this dropdown, the checkbox for 'Remove Obsolete Snoozed Alerts' is checked.

Name: *	2305_High Demand Alerts(Aggregated)
Description:	2305_High Demand Alerts(Aggregated)
Planning Area: *	MTLNORMAL (Unified Planning Area)
Versions / Scenarios:	Base Version X
Alert Definition Template:	
Severity: *	High
Category:

Status:	Active
Snooze Alerts For:	All Users
☒ Remove Obsolete Snoozed Alerts	

Fast Snoozing and Unsnnoozing

- If you have no comments to enter and you have already snoozed an alert of the same subscription, you can snooze an alert by hovering on it and clicking on the Snooze icon that will appear.
- It's very easy to edit or unsnooze an alert from the quick view information
- You can also edit the snooze information and make updates.

The top screenshot shows the SAP Planner Workspace interface. The header includes the SAP logo and 'Planner Workspace'. The main title is 'My Planner Workspace'. Below this, there are tabs for 'Workbooks' and 'Alerts'. The 'Alerts' tab is selected, showing a list of alerts. The list has columns for 'Location ID', 'Product ID', 'Week', and 'Consensus De...'. A 'Snooze' icon is visible on the right side of the list, indicating that an alert can be snoozed.

The bottom screenshot shows the same interface, but with a 'Snooze Information' dialog box open. The dialog box contains the following information:

- Snoozed For:** All Users
- Type:** Snooze Until
- Snoozed Until:** 08/31/2023 (2 Days)
- Comments:**

At the bottom of the dialog box, there are two buttons: 'Unsnnooze' and 'Edit'.

Demo

A blue geometric shape, resembling a parallelogram with a diagonal cut on its right side, positioned behind the text.

Appearance

Appearance

- The appearance feature has been enhanced to display the rules in the order in which they are applied to planning views.
- The basic rules have been streamlined to allow only one basic rule per rule type. Any existing duplicate rules will be merged into one, with the last rule winning over any previous one in case of an overlap.
- The key figure and time period rules can be reordered within their group.
- We now support appearance rules for attribute-based totals and time-based totals.
- The user can preview the rule changes without having to close the dialog and reopen it, by pressing the *Preview* button. The appearance dialog can be moved and resized to see the affected entities.

A blue geometric shape, resembling a stylized arrow or a parallelogram with a diagonal cut, pointing towards the right. It is positioned on the left side of the image, partially overlapping the text.

Display Planning Notes in Analytic Charts

Display Planning Notes in Analytics Charts

Analytics charts have been enhanced to display the planning notes if there are any.

Users can click on the discovery icon in the toolbar to identify which data points have planning notes.

Select "Show Planning Notes" to display the planning notes in a table below the chart.

A blue geometric shape, resembling a parallelogram with a diagonal cut, is positioned on the left side of the slide. It has a light blue gradient and a darker blue outline.

Ad-Hoc Filters for Jobs

Ad-Hoc Filters for Jobs

When scheduling jobs, you can now define ad-hoc filters. In case you prefer to use a planning filter, you can select it as usual, but you will now be able to see the conditions of the filter and make adjustments before scheduling the job.

To define an ad-hoc filter, click on *Adapt Filters*, select the attributes, and subsequently maintain the filter conditions. Filter conditions can also be pasted from the clipboard.

The screenshot shows the 'Schedule Job' dialog box. At the top, the 'Job' is set to 'Statistical Forecasting' and the 'Job Description' is 'Deletes and recalculates Forecast.' Below this is the 'Parameter Section' which is expanded. It contains two tabs: 'General' and 'Forecast'. In the 'General' tab, the 'Version' is 'Base Version (_BASELINE) x' and the 'Planning Filter' is 'Ad Hoc Filter x'. In the 'Forecast' tab, the 'Aggregation Level' is 'Location ID (ERP) (LOCID) x | Customer ID (CUSTID) x | 1 more' and the 'Forecast Model' is 'SMOOTHINGALGO x'. Below these tabs, there is a 'Customer ID' field with the value '1000002 x | 0012100001 x |' and a 'Clear' button. To the right of the 'Customer ID' field is a button labeled 'Adapt Filters (1)'. At the bottom of the dialog, there are 'Schedule' and 'Close' buttons. The bottom of the dialog also shows a table with columns for 'Statistical Fcst Qty (Low = 1)', '701', '695', '689', '683', and '677'.

Keyboard Shortcuts

Keyboard Shortcuts

Keyboard shortcuts enable you to navigate the user interface and access functions efficiently.

The following table gives an overview of the most important keyboard shortcuts. Further details can be found here [Keyboard Shortcuts | SAP Help Portal](#).

UI Element	Action	Keyboard Shortcut
Refresh	Refresh the data for all of the components in a Planner Workspace and discard any unsaved key figure data.	Microsoft Windows: Ctrl + Alt + R Mac OS: control + R
Simulate	Simulate the effect that changes to key figure values will have on all of the components in a Planner Workspace.	Microsoft Windows: Ctrl + Alt + B Mac OS: control + B
Save	Save changes you've made to key figure values.	Microsoft Windows: Ctrl + Alt + S Mac OS: control + S
Edit	Edit appearance settings that you've created.	Microsoft Windows: Ctrl + Alt + T Mac OS: control + shift + T

Suppress Zero and Null Entries in Analytic Charts

Suppress Zero and Null Entries in Analytic Charts

You can now edit an analytics chart and use the **Remove null entries** or **Remove zero data points** options. This will allow you to display the data in a more readable way.

Remove null entries:

This option will remove all planning data from the chart in case the appropriate key figure value is null

Remove zero data points:

This option will remove all planning data from the chart in case the appropriate key figure value is zero (=0)

The screenshot shows the 'Settings' dialog for an analytics chart. The 'General' tab is selected. The 'Exceptions' section at the bottom is highlighted with a red box. It contains two checkboxes: 'Remove null entries' and 'Remove zero data points'. Both checkboxes are currently unchecked.

Transportation Load Building: Settings

Transportation Load Building: Settings

- The Transportation Load Building (TLB) component of Planner Workspaces now provides settings for component filters and settings that are specific to TLB
- Component filters:
 - **Version / Scenario:** Select one version or scenario, multi-selection is not possible
 - **Time Periods:** Select one interval of time periods
 - **Filter Options:** Defines the source of the filters for versions / scenarios and time periods. The source can be the workbook or the component.
 - Outlook: Component specific attribute-based filters will be added in a future release
- Settings specific to TLB:
 - **Filter for Stock Transfer:** Defines whether the distribution order table shows at stock transfer lanes only deployment requisitions or all types of requisitions
 - **Unload Operation:** Defines the target order type and the fixing status of unloaded items
 - Outlook: Configuration of table views for load items and for distribution orders will be added in a future release
- The settings can be saved to a new content type „Transportation Load View“.

Business Catalogs for Planner Workspaces

Business Catalogs for Planner Workspaces

Previously there was one business catalogs covering all features provided in Planner Workspaces. As of release 2311 the customers need to move to the new business catalogs to avoid missing authorization issues after the upgrade. The following business catalogs are available since SAP IBP 2305:

Planner Workspaces (SAP_IBP_BC_PWSPACES_PC)

This business catalog replaces the old Planner Workspaces (SAP_IBP_BC_PWS_PC) business catalog, which will be removed with SAP IBP 2311. In addition, the Basic Functions (SAP_IBP_BC_BASIC_PC) business catalog will no longer be required for users to be able to set the default planning area to be used in the Planner Workspaces app. The new business catalog must be assigned to the relevant business role to allow users to access the Planner Workspaces app and to set the default planning area.

Planning View Component (SAP_IBP_BC_WPV_COMP_PC)

This business catalog must be assigned to the relevant business role to allow users to view, create, and edit planning views in the Planner Workspaces app.

Order Visibility Component (SAP_IBP_BC_OVI_COMP_PC)

This business catalog must be assigned to the relevant business role to allow users to view and change orders in the Planner Workspaces app.

Analytics Chart Component (SAP_IBP_BC_ANA_COMP_PC)

This business catalog must be assigned to the relevant business role to allow users to view and edit analytics charts in the Planner Workspaces app.

Job Scheduling (SAP_IBP_BC_JOBSCHED_PC)

This business catalog must be assigned to the relevant business role to allow users to schedule and run jobs created in the Job Definitions app.
